

Update, July 10, 2006

Macintosh Universal Binary IPOST for FMP 8.5

So fast, especially for Mactel

Calls have changed.

External("IPOST_PostDataFromField"; IPOST use:url & "|" & POST use:data)
Is now...

IPOST_PostDataFromField(IPOST use:url & "|" & POST use:data)

Notice all functions expect 1 parameter, just remove **External**(" and replace ";" with (

IPOST_PostDataIntoFileUsingGet(IPOST use::url & "|" & IPOST use:path) now returns
"\$UserCancelledError" when user clicks on "cancel" button on progress bar dialog.
